(413)682-4715 | Griffinmmatthews@gmail.com | github.com/Griffmatt | Springfield, MA

TECHNICAL SKILLS

Languages: JavaScript, HTML, CSS, Python, Java

Frameworks and Libraries: Bootstrap, Tailwind, SCSS, Redux, React, TypeScript, NextJS, React Native, Node, Express, MongoDB, PostgreSQL, NoSQL

Other: GIT, BEM, CSS Modules, NPM, Axios, GraphQL, Apollo, ZOD, Prisma, React Testing, Jest, Cypress, Asana, Trillo, AGILE, Scrum

PROJECTS

You can find my work here in my [Project Portfolio](#)

Bug Tracker | *Javascript, React, SCSS, BEM, axios, Redux*

- [Live Site](#)
- This is a bug tracker created using react. I used SCSS, BEM naming convention, and a mobile first design to handle styling the project, as well as Redux to handle global state and the context API to handle some of the smaller global state changes. React hooks were huge part of this to help maintain the local state mainly using useEffect, useState, and react hook form to handle the form data. This app was tested using the react testing library along with jest to create unit and integration tests on some of the higher traffic areas of the site. Users can write suggestions, comment on others suggestions, up vote which suggestions they think are most important, and check which of the suggestions are currently in progress or have been completed. I am currently working on a way for users to login, and have implemented a very simple login for testing purposes.

Audiophile | *Javascript, React, SCSS, Redux, Context*

- [Live Site](#)
- Audiophile is an ecommerce store specializing in audio devices, it was built with react, and utilizes redux, the react context api, SCSS, Typescript. Users are able to view multiple different items, add them their cart, view their cart, and checkout.

Movie Mania | *Javascript, React, SCSS, API*

- [Live Site](#)
- Movie Mania is a fully responsive movie database, allowing users to filter, search, rate and view information on thousands of movies. Users can keep track of their thoughts on certain movies, and even keep a list of all their favorite movies. Movie Mania uses the TMDb api to fetch information, and post users ratings.

Wordle Clone | *Javascript, React, CSS*

- [Live Site](#)
- Using React, Hooks, CSS, i recreated the popular game wordle, it takes an answer checks if it is correct and returns hints to what the answer is.

PokeDex | *Javascript, React, Redux, CSS*

- [Live Site](#)
- Using React, Redux, Hooks, JSX, and Bootstrap you are able to search though 151 different pokemon, 11 different gym leaders, capture pokemon from various areas to add to your team, and create teams of 6 pokemon.

EDUCATION

Assumption University

Worcester, MA

Business Management- 3.4 GPA

NuCamp

May 2021 – November 2021

Full-stack coding boot camp

- Nucamp is a 6 month coding bootcamp that covered the basics of HTML, CSS, and Javascript. We then learned more indepth different way to approach CSS, mostly using Bootstrap. Then we went into a deeper dive into javascript and learned react, and react native. Then ultimately finished by learning some back end frameworks and databases in Node.JS, express, and MongoDB
